Talal Qasim Software Engineer/Fin-Tech Backend Enginner

talalqasim41@gmail.com My Portfolio github.com/Talal-q19 linkedin.com/in/talal-qasim-b8622b203

Abu Dhabi, UAE +971566143165

Skills

Programming Languages — Java, JavaScript, Python, C, C++, C#, HTML/CSS

Framework/Technologies — Spring Boot, Spring Security, Spring AI, React, Node.js, Express.js, Flask, REST APIs, WebSockets, Strapi, PostgreSQL, MySQL, MongoDB, Redis, Apache Kafka, OAuth 2.0, JWT, Microservices Architecture, Event-Driven Architecture, AWS (EC2, RDS, IAM, Pub/Sub Messaging), Docker, Docker Hub, Jenkins, SonarQube, CI/CD, Webhooks, Git, Linux, Unit Testing, Integration Testing, Zand APIs, Sumsub APIs, Binance API, OKX API, NumPy, pandas, scikit-learn, Common-Library

Professional Experience

Backend Engineer (Full-Time) 2025/02 – present | Dubai, UAE

EUNX Investment LLC

Backend Engineer | Fintech / Crypto Trading Platform

- Contribute to the development and maintenance of a **production-grade fintech and cryptocurrency platform operating across three regions**, supporting spot trading, P2P, OTC, fiat wallets, crypto wallets, KYC, payments, and internal administrative operations.
- Supported the company's regulatory and technical readiness for expansion across **European, UAE, and UK markets**, contributing backend functionality, controls, auditability, compliance workflows, and platform requirements used in licensing and regulatory processes, including **MiCA-related European requirements and UAE VARA requirements**.
- Build and maintain backend services for customer-facing applications and the internal **Admin Dashboard**, covering user management, trading controls, compliance workflows, fiat wallet operations, transaction monitoring, audit visibility, RBAC, and secure administrative actions.
- Work on **crypto wallet services**, including hot and cold wallet workflows, wallet operations, deposits, withdrawals, transaction processing, and integration with trading, user-account, and transaction services.
- Integrated **Zand payment services** for fiat wallet and payment workflows, supporting deposits, withdrawals, transaction processing, payment status tracking, and reconciliation-related flows.
- Integrated **Sumsub** for KYC and identity verification, supporting automated onboarding, verification status handling, identity checks, and compliance workflows required across different jurisdictions.
- Developed and integrated a **Strapi-based content service** for managing legal documents, privacy policies, terms, and other regulatory content across multiple locales, using backend APIs, **AWS-based publish/subscribe messaging**, and **webhooks** to support content updates, synchronization, and event-driven distribution across platform services.
- Develop and maintain secure **REST APIs** using Spring Boot and Spring Security, incorporating JWT and OAuth 2.0 authentication and authorization, validation, exception handling, and secure access controls.
- Produce detailed **backend API documentation** for frontend developers, covering endpoints, authentication, request/response structures, validation rules, error handling, and integration flows, while actively assisting frontend engineers with API integration and troubleshooting.
- Implement **unit and integration tests** covering service logic, APIs, database interactions, and external integrations to improve reliability, validate business-critical financial flows, and reduce regression risk.
- Work with **SonarQube** to identify and resolve bugs, security vulnerabilities, code smells, maintainability issues, and technical debt as part of the backend development lifecycle.
- Use **Jenkins CI/CD pipelines** for backend builds, automated testing, validation, and deployment workflows, including investigating build and pipeline failures related to application changes.
- Participate in **production launch war rooms, release activities, and live debugging sessions**, analysing application logs, API behaviour, database activity, external integrations, and inter-service communication to diagnose and resolve production issues.
- Use **Kafka** for asynchronous and event-driven communication between backend services, **WebSockets** for real-time platform functionality, and **Redis** for caching and performance optimisation.
- Integrate and consume third-party APIs and services, including cryptocurrency market-data providers such as **Binance and OKX**, payment providers, KYC providers, and other external financial services.
- Work with **PostgreSQL** for relational data persistence, querying, transaction handling, and backend data operations across financial and trading workflows.
- Collaborate closely with **frontend, QA, DevOps, product, compliance, and other backend engineers** throughout feature development, regulatory initiatives, testing, production releases, and incident resolution.

Technologies: Java, Spring Boot, Spring Security, JWT, OAuth 2.0, PostgreSQL, Redis, Kafka, WebSockets, REST APIs, Docker, AWS EC2/RDS, AWS Pub/Sub Messaging, Webhooks, Strapi, Jenkins, SonarQube, Zand, Sumsub, Binance API, OKX API

Software Engineer 2024/08 – 2025/02 | Abu Dhabi, UAE

Federal Electrical (*Full-Time*)

- **Developed Attendence Biometric System** which prints reports upto 80,000 records in 4-5 seconds
- previous attendence system took upto 2 days to print a report optimised it to print wihtin 5 seconds
- **Software Development and Maintenance**: Design, develop, and maintain scalable software solutions across all phases of the development lifecycle, ensuring high performance and reliability.

- **Cross-Functional Collaboration and Testing**: Collaborate with cross-functional teams to deliver high-quality code aligned with business objectives, conducting rigorous testing to enhance software quality and user experience.

Backend Developer (Part-time) 2024/02 – 2024/08 | Berlin, Germany
Bacha Smart Solutions
- **RESTful API Development**: Designed, developed, and maintained robust RESTful APIs to support seamless communication between systems.
- **Database Optimization**: Enhanced database performance through optimization techniques, ensuring efficient data handling and storage.
- **Code Quality**: Resolved backend issues with critical problem-solving skills and conducted code reviews to uphold high-quality standards and system reliability.

Projects

EUNX INVESTMENT LLC 2025/02 – Present
- Built secure backend services for a **production-grade crypto trading and fintech ecosystem**, covering authentication, market data, wallets, payments, KYC, admin operations, audit logging, and real-time communication.
- Implemented authentication and authorization using **Spring Security, JWT, OAuth 2.0, Redis, 2FA, and dynamic RBAC**, ensuring secure access control across distributed microservices.
- Developed a custom **Market Data microservice** integrating with **OKX and Binance APIs** to process real-time tickers, candlestick data, and normalized exchange market feeds.
- Contributed to **crypto wallet infrastructure**, including hot and cold wallet workflows, transaction handling, and integration with **Liminal** for secure wallet and custody operations.
- Integrated **Zand** for fiat payment workflows and **Sumsub** for KYC verification, supporting onboarding, identity validation, compliance checks, and regulatory readiness.
- Built backend systems for the **Admin Dashboard**, including user management, compliance workflows, wallet operations, audit visibility, permission controls, and operational tools.
- Engineered an encrypted real-time chat system using **WebSockets, Apache Kafka, and encrypted file transfer workflows**.
- Designed structured **audit logging and compliance-focused backend workflows** to improve operational transparency, traceability, and regulatory support.
- Supported deployment and infrastructure workflows using **Docker, AWS EC2, Amazon RDS, and CI/CD pipelines**.

Biometric attendance System integrated with hardware
node js , express js , mysql , HTML , CSS, C++
- Biometric Attendance System: Developed a fingerprint-based clock-in/clock-out system integrated with a redesigned company database, capable of fetching, updating, and storing records from multiple tables (around 50k rows) within 5 seconds, ensuring seamless data management and accuracy.
- Advanced SQL and Reporting: Implemented complex SQL queries for efficient data retrieval and generation of detailed PDF reports, enhancing data insights and reporting capabilities.
- Automation and Admin Dashboard: Designed a Python script to automate data fetching, and built an admin dashboard for HR to access specific tables, as well as a super admin panel for comprehensive access and editing across all tables.

Video Streaming and Social Interaction Application
Node js , express js , MySql , Python , HTML
- Interactive Streaming Platform: Developed a hybrid platform enabling users to stream movies while engaging in real-time online interactions, enhancing the social viewing experience.
- AI Recommendation Algorithms: Implemented two recommendation algorithms: a user-based model in Python for personalized movie suggestions based on user preferences, and a content-based model in JavaScript for recommendations tailored to movie attributes.

Data-Visualization with AI features
Python , React.js, MySQL, pandas , scikit-learn , Flask
- Automated SQL Table Creation from Excel Files – When a user uploads an Excel file, the system dynamically creates an SQL table using the file name as the table name and its headers as column names, ensuring structured data storage.
- Schema-Driven Dynamic Filtering – The frontend fetches the table schema (column names) from the backend and generates dynamic filter fields based on these headers, allowing users to apply real-time filters without predefined configurations.
- Efficient Data Querying & Pagination – User-defined filters are converted into SQL queries, retrieving relevant data efficiently while maintaining smooth pagination for both filtered and unfiltered records.

Education

Bachelors of Science in Software Engineering 2020/08 – 2024/12 | Abu Dhabi, UAE
Al Ain University
- Object-Oriented Programming, Data Structures and Algorithms, Database management System
- Object-Oriented Analysis and Design, User Interface Design, Software Measurement, and Testing
- Operating Systems, Foundations of Software Engineering, Software Requirements and Specification, Software Design.
- Software Project Management, Design Analysis of Algorithms, and Software Evolution and Maintenance

Full Stack Development 2022/05 – 2022/07 | Dubai, UAE
AstroLabs
- MERN Stack Development Bootcamp
- HTML , CSS , Javascript , Github , nodeJS, ReactJS, Express JS, MongoDB , SQL , DevOps
